

GARRETT SUPER SCANNER™

Hand-Held Metal Detector

World's Standard for Hand-Held Metal Detectors

FEATURES

Model # 1165170 with 9v Battery

- Detects medium-sized pistol from distance of 9", large knife, up to 6"; razor blade, 3"; handcuff keys, foil-wrapped drugs, electronic components, tiny jewelry, 1"
- Automatic retuning (no adjustments ever necessary)
- Maximum sensitivity not subject to arbitrary adjustment, although pressure switch permits momentary curtailed sensitivity if ambient metal (i.e., floor rebar) causes interference.
- Earphone attachment permits "silent scanning"
- Large scan surfaces for quick and thorough scanning
- Automatic Battery Check
- No tools required to change batteries
- High impact ABS case with reinforced coil compartment provides unequalled ruggedness.

FOR AIRPORTS, LAW ENFORCEMENT, SCHOOLS, COURTHOUSES, CORRECTIONS, LOSS PREVENTION

The proven dependability, ease of operation and durability of Garrett's Super Scanner have made it the detector most demanded by police and all other security officers. Press a switch and precise automatic circuitry detects every concealed metallic item—knives and guns to handcuff keys, foil-wrapped drugs and tiny jewelry or electronic components. Large surfaces permit quick and thorough scanning.

Simplicity of operation is unmatched. Because no tuning or other adjustments are ever necessary or even possible, maximum sensitivity of the instrument can never be compromised, either "accidentally" or otherwise. Yet a Reduced Sensitivity mode is available—with a pressure switch—for scanning near rebar floors or other ambient metal. An audible alarm and a

visual signal indicate detection of any metal, but an earphone is available if "silent scanning" is desired.

The Super Scanner's 9v battery, included with the detector, stands up to long hours of use. It can be quickly changed without tools. An optional rechargeable battery kit featuring a Ni-MH battery is available.

The Olympic Games demand the best, and the Super Scanner has been their choice since 1984. Countless thousands of hours of field use have proven the dependability and ease of operation of the Super Scanner. It is rugged and functions with complete safety to wearers of pacemakers or other implanted medical devices. The Super Scanner is engineered and manufactured in the USA.
