## EVACMAT <sup>CE</sup>

(Part of the “SKI” range of products)

The Bariatric EvacMat is designed to assist emergency services personnel or designated moving and handling staff to evacuate bariatric patients or people from locations such as a hospital ward or other public or private buildings in the event of an emergency.

- Can assist with the horizontal or vertical evacuation of Bariatric Service Users
- Tough slippery base enables Service Users to be moved over any surface – indoor or outdoor
- Service User is securely held and cocooned in place
- Coloured code cross straps
- Four side ladder handles and short positioning handles
- Head and foot ladder handles
- Four anchor points
- Easy clean after use
