

SOS *Rescue Tools*

The SOS Rescue Unit is a unique compact tool-kit which includes twelve (12) tools with a combined weight of only 2.7 kg. It has been specifically designed with the primary purpose of saving peoples' lives.

For example, in the case of a car accident where people have sustained severe injuries and are trapped inside the vehicle, time is of the essence! The SOS Rescue Unit's unique design and size enables emergency personnel to access and utilize the tools far quicker than larger hydraulic equipment that might be unavailable, or perhaps might not reach the accident scene in time. The SOS Rescue Tool unit has also been acknowledged to be highly useful in other situations than those of an emergency.

Today this tool is used in almost 30 countries worldwide by rescue personnel, disaster teams, firefighters, police, ambulances, military forces, civil defense, etc.

The unique and exceptional properties of the SOS Rescue Tool are its light weight, compact size, number of functions, and its high quality. An accident doesn't always happen where emergency personnel can easily access the use of electrical and hydraulic equipment, and such equipment can often be too heavy to carry over long distances.

Including only six (6) separate parts, the SOS Rescue Unit can be made up into twelve different powerful tools including an axe, crowbar, heavy hammer, light hammer, plate-cutter, saw for metal, saw for wood and glass, knife, chisel, spade, hoe, and an angle and gauge rod. The set replaces a toolbox which normally weighs up to approx. 30 kg. Due to its light weight, it has the ability to be connected to a person's belt without it hindering the user. This makes it possible for the person to run, climb, or use both hands for other important things while still carrying most tools necessary for a rescue situation. Simultaneously, this unit is easy to store and uses a minimum of space in a vehicle. Vehicle mounting brackets are available for both the holster version and case version.

By connecting the parts together in different ways, one creates an incredibly varied assortment of tools in just a matter of seconds. In use, the tools are easy to handle and efficient, which saves time when time matters the most – saving lives.

All parts of the SOS Rescue Unit are produced with heavy duty materials and with the utmost reliability in mind. The handles are made of tempered steel, are epoxy lacquered, and equipped with heavy duty rubber grips for safe and comfortable handling. Parts like the crowbar claw and the axe-blade are made of tempered tool-steel, and the saws and knife are made of bimetallic, non-chattering high-speed steel. The holster (available in fluorescent orange or military green, with desert tan on special request) is manufactured from heat resistant polyamide reinforced with fibreglass, and the case is manufactured from impact resistant plastic. Further, every tool is assembled by hand and is inspected before packing. Whether in the holster or plastic case, the SOS Rescue Unit is made for long-term storage, and heavy duty use.

The SOS Rescue Tool is undoubtedly the world's most versatile and portable set of rescue tools available, and is easy to use for everyone. When lives are at stake, you can depend upon the SOS Rescue Tool to help complete your mission.

Emergency tool come in six (6) parts that can be combined to twelve (12) unique tools. It comes in a smart storage suitcase or a convenient holster. The total weight of 6 lbs/2,7 Kg, makes the SOS Rescue Tools an excellent product when there are lives at stake.
